A Reminder to AALAS Certification Candidates

The LATG certification examination is a comprehensive examination that covers the material in the:

1. LATG Training Manual,;
2. LATG reference list,;
3. LAT Training Manual,;
4. LAT reference list,;
5. ALAT Training Manual, ; and
6. ALAT reference list.

The questions in this workbook have been developed independently from the questions that are part of the certification examination question pool, and are meant to help you review the material presented in the *LATG Training Manual* only. The certification exam will contain questions on all the materials listed above. Although this workbook is an excellent study aid, **it is not enough to provide adequate preparation for the LATG certification examination!** You must also study the other items listed above.

The AALAS Educational Resources Committee is responsible for developing the training manuals and collateral materials. Another AALAS committee, the Certification and Registry Board, produces the questions used in the certification exams. The two committees work independently from each other, so the questions in the workbook are different from the ones in the certification examination.

Please check the Technician Certification Handbook, available online on the AALAS website at <https://www.aalas.org/certification>, for detailed information on the certification program.

Although every effort is made to maintain the highest degree of accuracy in all AALAS materials, errors sometimes do occur. As soon as AALAS is notified of an error, we post the correction on the AALAS website (www.aalas.org/bookstore/errata.aspx), and the correction is made in the next printing of the workbook.

Any suggestions or comments about this workbook should be addressed to info@aalas.org.
